CR'S DIAGNOSTIC PROTOCOLS

Needs assessments (10-question survey) must be completed to initiate the evaluation process and is followed up by a 1-hour Zoom consultation. The assessments and screeners which align with your child's chronological age and developmental stage will be offered at the time of testing. Core Evaluation may be selected al la carte. Add ons must be combined with Core Evaluation. There is no limit to the quantity of assessments and screeners that you can select. All assessment and screeners are documented in a written report and delivered to the caregiver. Treatment plans are projected to cover 12-months of consistently rendered therapy and contain long and short term goals.

BOSS BABY (EARLY DETECTION 0-3):

CORE EVALUATION —□

Needs Assessment \$0

Consultation \$110

schedule a 1 hour session to discuss concerns and answer the critical questions that help to detect speech-language, hearing, and feeding disorders.

Sound Inventory Assessment \$350

Speech sound disorder is an umbrella term referring to any difficulty or combination of difficulties with perception, motor production, or phonological representation of speech sounds (ASHA.org) This evaluation assesses Accurate speech sound productions, sounds in various word positions, and in different phonetic contexts; sound combinations such as vowel combinations, consonant clusters, and blends. Disorders are categorized into one of 5 different categories. The child's inventory will be analyzed and compared to age-matched peers.

Language Assessment \$550

Language is divided into two domains, receptive language and expressive language. This evaluation probes verbal and non-verbal communication across different contexts and compares it to typical development. This report is written to be culturally sensitive and inclusive. Standardized formal and informal measures are used to produce a comprehensive assessment.

ADD ONS

Play Assessment And Analysis **\$200**

“Play is the work of children,”-Maria Montessori. When children have not yet acquired language, a play assessment reveals growth and development across the 5 areas of human development.

At Home Observation With Write Up **\$325**

This add on provides clinical insight in your child’s most naturalistic environment. Specific areas of analysis include cognitive, communication, social/emotional, fine and gross motor development.

Feeding/Swallowing Screener **\$200**

Rule out the possibility of dysphagia with this non diagnostic screener.

Treatment Plan **\$325**

Treatment plans are projected to cover 12-months of consistently rendered therapy and contain long and short term goals.
